

Executive Findings Note: E-Commerce Customer Behavior & Sales Analysis

Prepared by Krishna Kausik Barik

17,049 ORDERS	5,000 CUSTOMERS	\$21,779,052.59 TOTAL GROSS REVENUE
------------------	--------------------	--

1. Revenue by Product Category

FINDING → Electronics generates \$10,481,897.65 (48.1%) of gross revenue, leading all 8 categories.

WHY → Order volume is even (~2,000–2,200 orders per category), but Electronics AOV is \$5,053.95 versus \$163–\$1,953 elsewhere.

So WHAT → High concentration risk: an inventory bottleneck or pricing disruption in Electronics threatens nearly half of revenue.

2. Retention vs. Spend Behavior

FINDING → Returning customers generate \$19,190,720.46 (88.1%); new customers \$2,588,332.13. AOV is virtually identical.

Customer Type	Orders	Revenue	AOV
Returning	15,039	\$19,190,720.46	\$1,276.06
New	2,010	\$2,588,332.13	\$1,287.73
Total	17,049	\$21,779,052.59	

WHY → Returning customers do not spend more per transaction; they drive disproportionate order volume.

So WHAT → Growth is driven by retention frequency, not larger baskets. Prioritize retention over acquiring single-purchase buyers.

3. Payment Methods

FINDING → Credit Card leads with \$9,069,714.65 (41.6%), followed by Debit Card (\$5.15M) and Digital Wallets (\$4.19M).

WHY → High-ticket purchases, especially Electronics, skew transactions toward revolving credit and card rewards.

So WHAT → Gateway stability and card-friction monitoring are critical, protecting over 40% of company cash flow.

4. Geographic Distribution

FINDING → Istanbul generates \$5,646,595.78 (25.9%), outpacing Ankara (\$3.05M) and Izmir (\$2.65M).

WHY → Urban density and fast fulfillment infrastructure concentrate transactions in the Western Turkish corridor.

So WHAT → Prioritize regional marketing and warehouse distribution in Istanbul and the Ankara/Izmir hubs for maximum ROI.

5. Demographic Tiers (Age Groups)

FINDING → Ages 26–35 are the primary engine (\$6,623,009.07), closely followed by 36–45 (\$6,431,670.03). Ages 46–55 contribute \$3.01M; 56+ accounts for \$744K.

WHY → Working professionals (26–45) combine the highest disposable income with strong e-commerce adoption.

So WHAT → Keep brand positioning and ad spend focused on customers aged 26–45.

6. Customer Satisfaction (Ratings)

FINDING → Home & Garden holds the nominally highest rating (3.93 / 5.0), followed by Beauty (3.92) and Sports (3.92).

WHY → Scores are tightly clustered across all categories (3.86–3.93).

So WHAT → No statistical outlier or failing category exists; focus feedback initiatives on platform-wide improvements, not category fixes.

7. Units Purchased per Order

FINDING → Sports leads at 3.05 items per order, but all categories sit within a tight 2.96–3.05 band.

WHY → Cart behavior is uniform across the catalog (~3 units per order).

So WHAT → Test cross-category bundles and minimum-threshold promotions to expand this flat basket size.

Executive Takeaways

- (1) Protect Electronics and credit-card payment flows, which concentrate nearly half of revenue and over 40% of cash flow. (2) Invest in retention, since returning customers deliver 88.1% of revenue at the same AOV as new buyers. (3) Concentrate spend on Istanbul and customers aged 26–45. (4) Pilot bundle promotions to lift the flat ~3-unit basket.
